

Simple steps to get the proper fit to any type of binding - coil, comb, or wire.

1. Take the book being bound and lay it flat on a table.
 2. Don't compress the pages and measure the thickness of the binding edge.
 3. Take the measurement and add 1/8" - that will be the size of your binding element.
- Following this guideline, you will always have a proper binding size for your document.**
